Lincoln Rychucky, Hiba Al Abdali, Josh Rymkiewicz, Matthew Sexton, Neel Karsanbhai, Sam Ghalayini

Application name: Buff List

Three Features and how They will be Tested

Login:

Scenario - Create an account

- Try an email and password that are not colorado.edu
 - Should not be validated
- Try an email and passwords that are colorado.edu
 - Should be allowed to be validated since it has a colorado.edu email address

Scenario - Logout

- Click log out button to set user to empty for the session
 - User should no longer be signed into site so user can now no longer post new items to buff list

Scenario - Login

- User enters a username and password that are not valid
 - Notify user that the login credentials are invalid and they need to reenter.
- User enters a valid username and password
 - User is welcome back and current instance of bufflist is set to that user.

Add Posts:

Scenario - Non signed in user attempts to add a post

- Notify user that they must be logged in in order to add posts to Buff List

Scenario - Signed in user attempts to add a post

- User is allowed to add a post to bufflist once all of the fields are filled with text or required numbers. Once user hits submit the ad is posted to Buff List's feed

Search:

Scenario - User selects several boxes that describe the item and items related to those search terms exist in the current listings on buff list

- The buff list listings containing the tags being searched for are displayed in the order in which they were added to the site.

Scenario - User selects several boxes that describe the item and items related to those search terms do not exist in buff list.

- An alert is shown to the user telling them that their search criteria did not match any items in our database.
